

**A Journey of Highlights – CRON is the highlight** [2012-3-27]

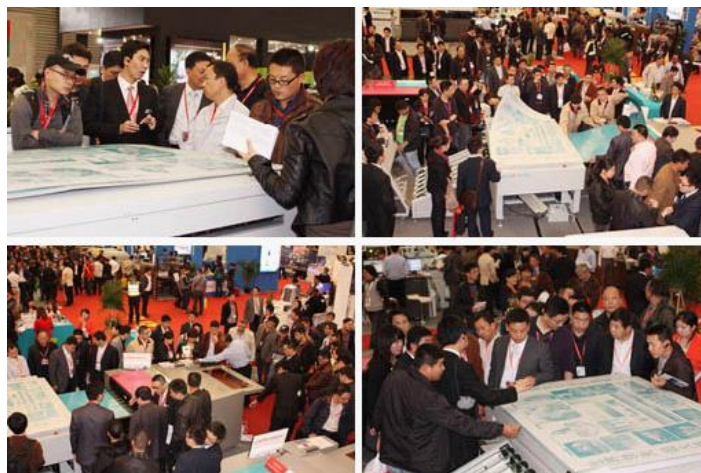

On 14th November, 2011, a delegation from CTP Journey visited the exhibition booth of CRON. Mr. Jin LJ, Sales Manager of CRON, introduced to the delegates and arranged a live demonstration of the latest technology: Linear Electric Motor Scanning System (LEMSS) which was first used in aeronautical industry.

LEMSS is as precise as up to 0.1 um tolerance level which exceeds, by far, the conventional Lead Screw technology. Precision, high-speed, abrasion-free and maintenance-free are the main features of LEMSS.

VLF (Very Large Format) CTP (model G series) fills in the vacuum of CTP product range in China. Latest technology including LEMSS has been employed. Also, new laser technology has been employed to enhance the image quality and aerodynamic technology has been employed in plate loading.

Relentless pursuit of excellence is the mission of CRON.
